Personal statement

I am working as a fullstack developer for 7 years. I have been experiencing a lot of issues and different outcomes from them and that simple thing making me a more experienced developer every day. I really love being a fullstack developer because there are tremendous possibilities and it allows me to learn continuously.

Core skills

- Programming languages that are being used in web and desktop application development. Ruby, Javascript, Typescript, SQL, Go, Java, Bash, Python...
- Working knowledge of Databases (MySQL, PostgreSQL, Firebase, MongoDB)
- Frameworks, libraries, and tools such as Rails, React, Vuejs, Angular, Git, AWS, Vert.x, Codeigniter, Heroku, NodeJS
- Have been working on different types of platforms, systems such as internal, advertisement, crowdsourcing, data mining, data streaming
- Different development approaches like an agile, waterfall
- Servers and network administration knowledge

Employment history

Senior Fullstack Engineer – Grab

(2017.12 - Present)

Working in a company's internal platform that is mostly being used by employees as well as some public-facing widgets that are work in a mobile app. I had a good chance to take a look at a fast-growing company and learning a lot from talented people for coding and non-coding skills.

Duties

- Develop an internal platform designed to ease employee working experience.
- Develop mobile app widgets to help mobile app users for getting useful information
- Mentor new joinee and help them settle down and being part of the team
- Working under the customized agile development process and automate the deployment process
- Build scalable, distributed components for a web app which could be separated as service if required

Full-stack Developer – Unimedia

(2014.05 - 2017.12)

I had worked on a representative agent of Japan company “Unimedia” in Mongolia for 2.5 years before the representative became a branch company named “Unimedia Solutions” at 2017.01. I started working as a senior fullstack developer after that transition.

Duties

- Developing projects that are using various technologies including ruby on rails, codeigniter, angularjs, mysql, jquery, bash, python, postgresql
- Maintaining AWS based environments that were working behind projects. I got some experience in the following. EC2, Lightsail, Lambda, VPC, S3, EBS, RDS, SNS, SQS, SES, Elasticache, Route53, Load Balancing, CloudFront, CloudWatch, Kinesis, Redshift
- Administrating local network connections, computers, servers, and virtual machines
- Researching technologies to clarify that it is usable, implementable and valuable for current running projects
- Providing support and suggestions for other teams on amazon web services and networking
- Diagnose performance issues on codes and queries and solve critical issues with the development team

Teacher – Aptech Training Center

(2012.05 – 2014.04)

I was teaching several subjects covering operating systems, computer parts, network, desktop application development, graphic user interface, design principles, and web application development in a practical way.

Duties

- Let students know how the computer parts work and examine its components
- Teaching various application development technologies and help students to choose correct, future-proof subjects. (C#, Java, HTML, CSS, Javascript, PHP, SQL etc...)
- Managing and maintaining the training center's local network, computers, servers to make secure, fast and stable working and studying environment within the office.
- Increase overall content quality by creating, editing, removing and rearranging the subjects and topics

Education

Manonmaniam Sundaranar University

(2010 – 2012)

Bachelor of Computer Science in Computer Applications

Aptech Worldwide Mongolia

(2008 – 2011)

From basic computer knowledge to desktop, web application development has been taught.
